DETAILED ACTION

1. This application is in condition for allowance except for the following formal matters:

Specification

2. The disclosure is objected to because of the following informalities: On page 26, [0061], lines 4, a current **IDO** is disclosed. In figure 3B the current source is **IDC**.

Appropriate correction is required.

Claim Objections

3. Claims 4, 11 and 12 are objected to because of the following informalities:

(1) In claim 4 line 3 and 4, remove the word **the** in front of "generating a data output".

(2) In claims 11 and 12 line 4, insert the word **at** in front of "a given delay"

Appropriate correction is required.

Allowable Subject Matter

5. Claims 1-3, 5-10 and 13-41 are allowed.

6. Claims 4, 11 and 12 are objected to due to minor informalities, but would be allowed upon compliance with the requirement.

As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with.

See 37 CFR 1.111(b) and MPEP § 707.07(a).

Art Unit: 2609

7. The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record, Tateishi (US 6057675) teaches a latch circuit and a comparator. However Tateishi does not teach encoding data to be transmitted as data pulses, the data pulses having a first pulse separation to represent a first logical data value and a second pulse separation to represent a second logical data value; transmitting the data pulses on a single communication wire; receiving the data pulses at a data terminal; generating a voltage ramp signal having a voltage magnitude between a first voltage and a second voltage; resetting the voltage ramp signal to the first voltage a first delay after the leading edge of each data pulse; regenerating the voltage ramp signal towards the second voltage a first time period after the resetting of the voltage ramp signal; detecting the voltage value of the voltage ramp signal at the leading edge of each data pulse; generating a data output signal associated with each data pulse having a first logical state when the voltage value of the voltage ramp signal is less than a threshold value; generating a data output signal associated with each data pulse having a second logical state when the voltage value of the voltage ramp signal is greater than the threshold value; and storing the data output signal associated with each data pulse in a shift register, a delay circuit and an N-bit shift register.

Conclusion

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 25 USPQ 74, 453 O.G. 213, (Comm'r Pat. 1935).

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hatakeyama (5420869) discloses a semiconductor integrated circuit device.
